

E-Business Ethics Part 2

E-Technology

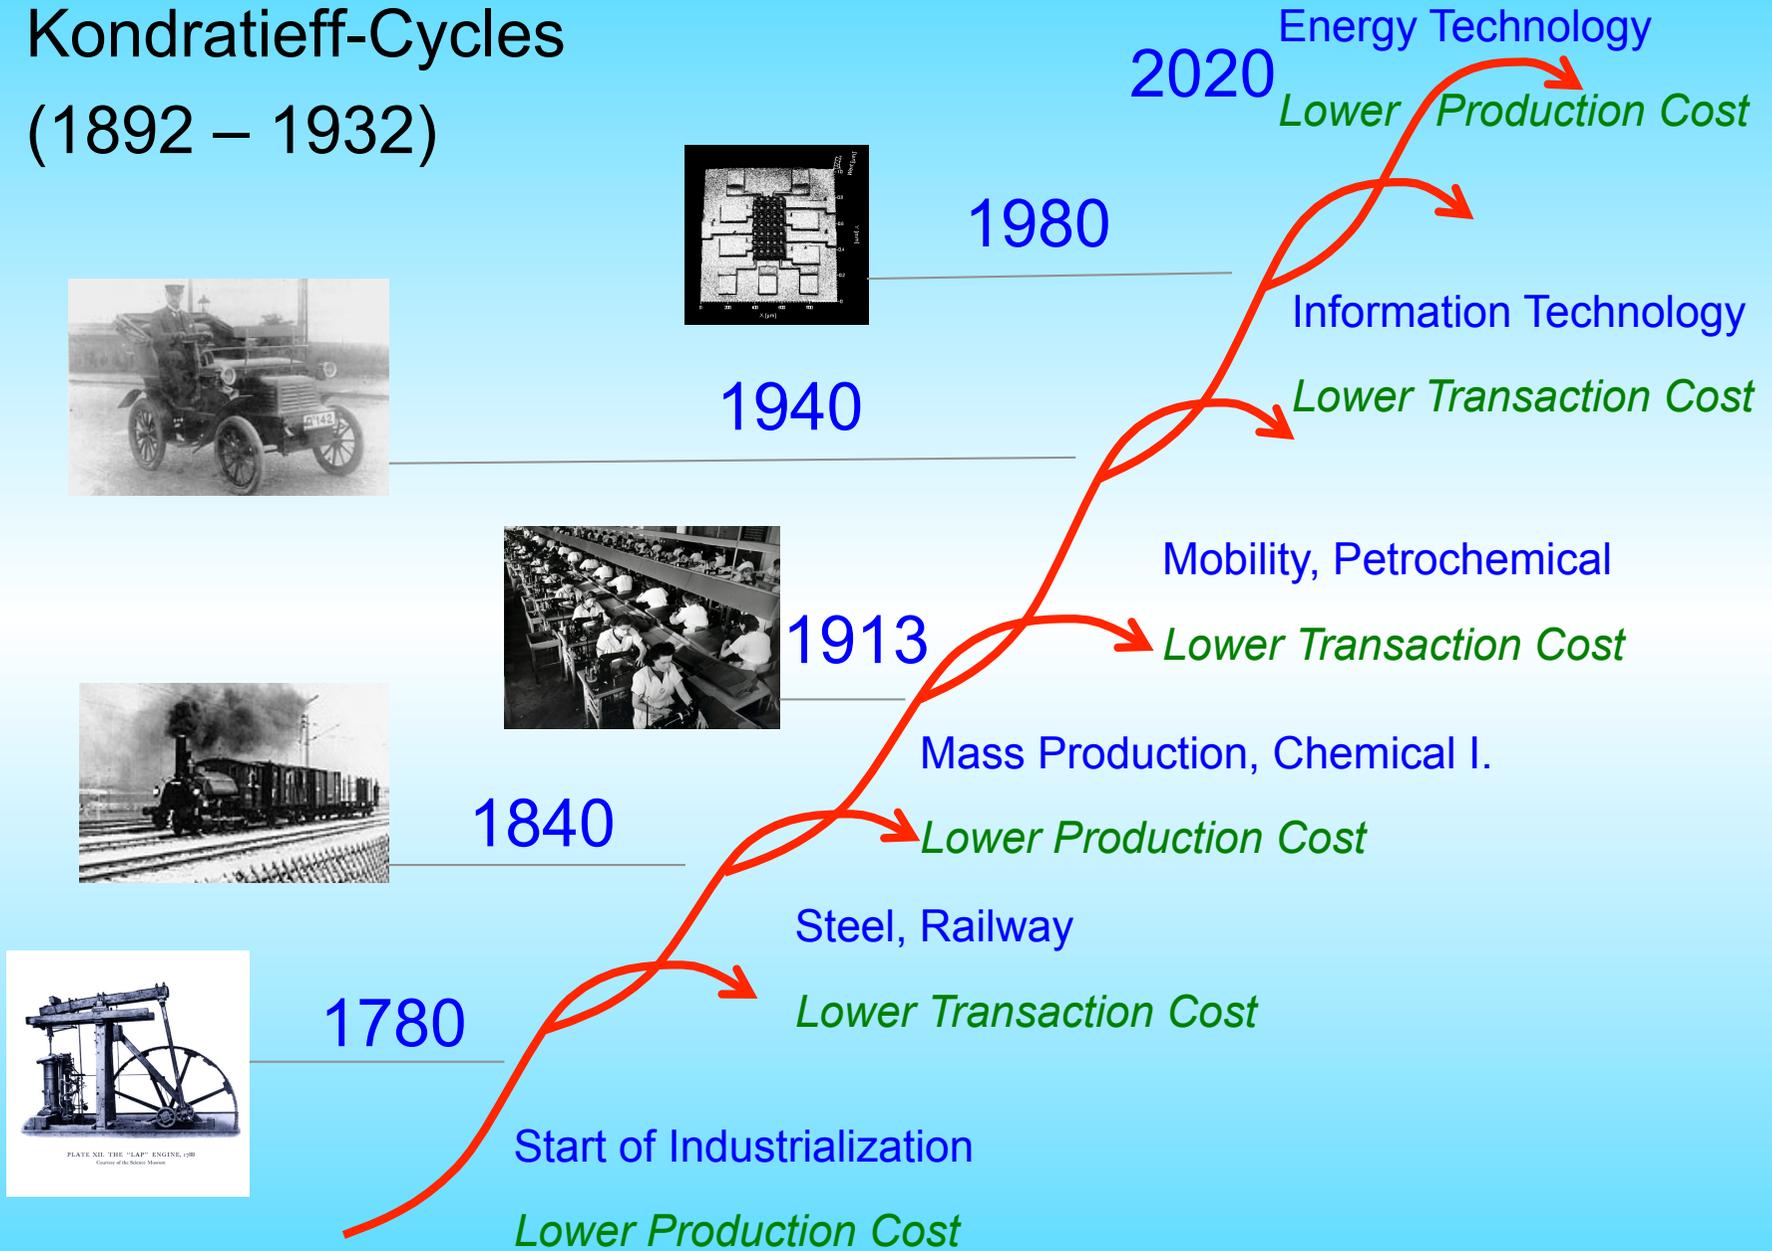

E-Conomy

Ethics

Prof. Dr. Tilo Hildebrandt

Longterm Economic Trends

Kondratieff-Cycles (1892 – 1932)

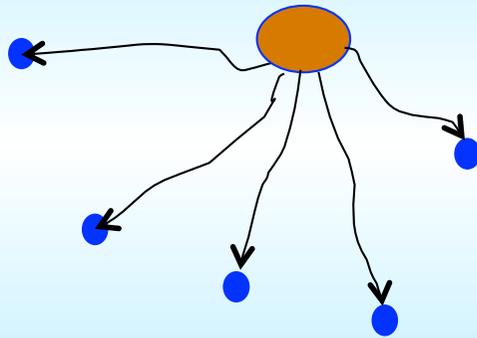

Marginal Rate of Costs

- Economies of Scale
- Learning Effect
- Network Effect

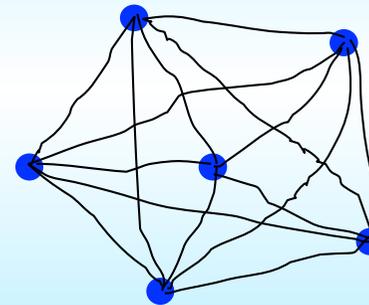

Actors on the Internet

Exponential Growth of Value

Sender: 5 CP

Network: 15 CP

generally

$$CP = A - 1$$

$$CP = (A^2 - A) / 2$$

CP := Communication Possibilities – A := Actors

Virtual World

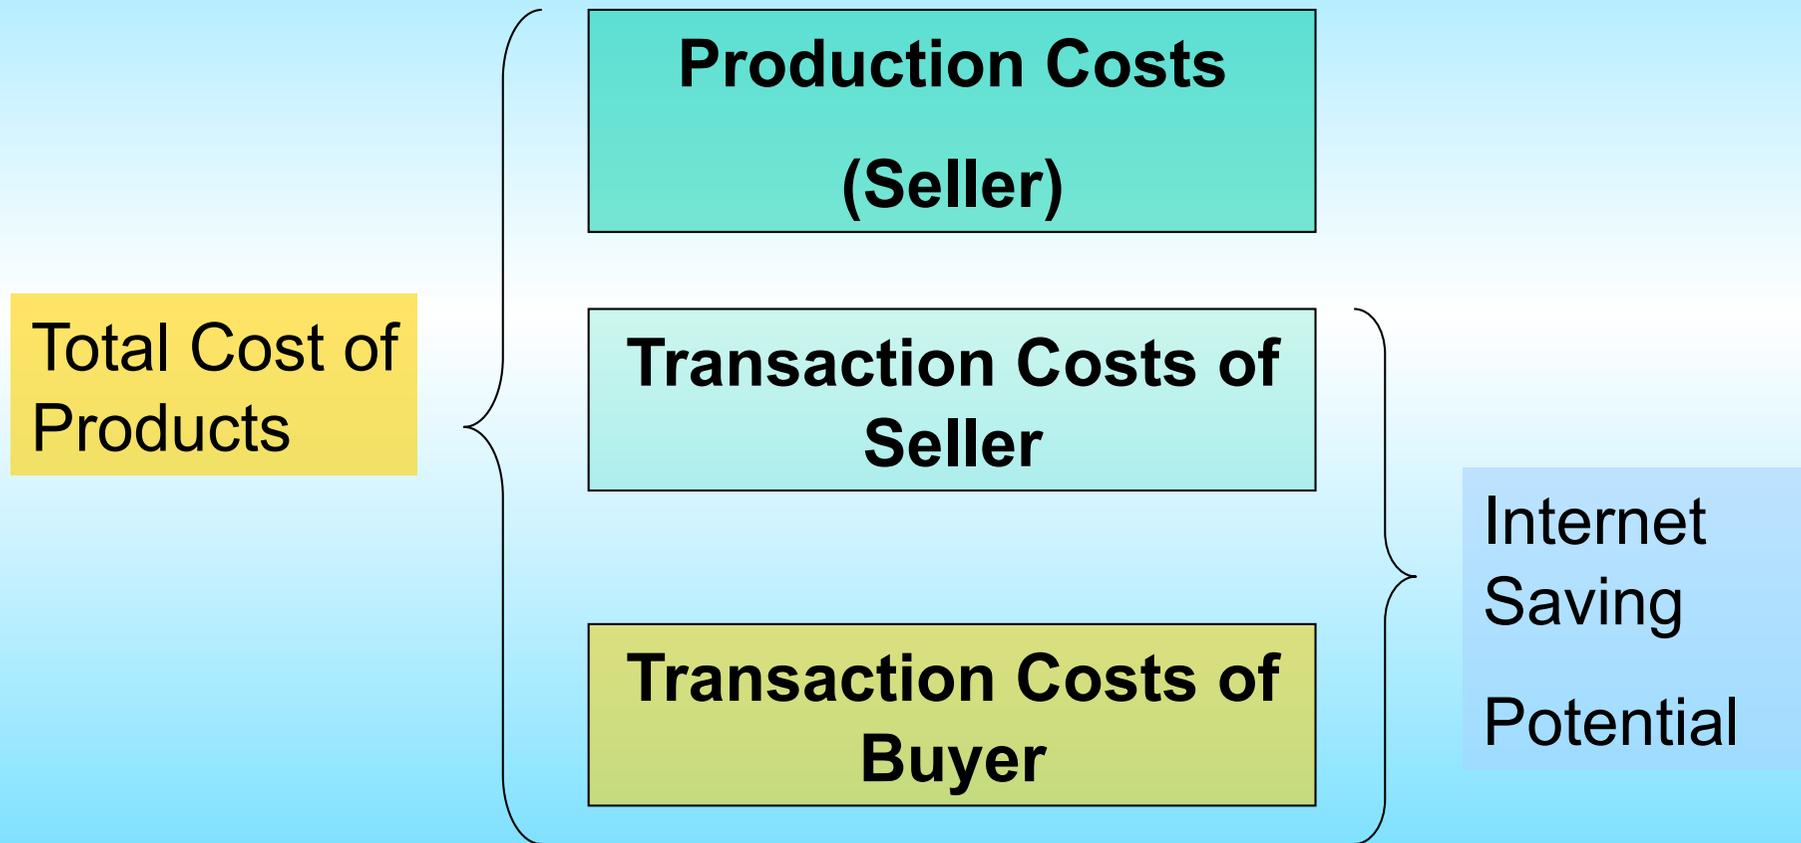

Virtual
Community

Virtual
Identity

Money

Postindustrial Economy (Ronald Coase)

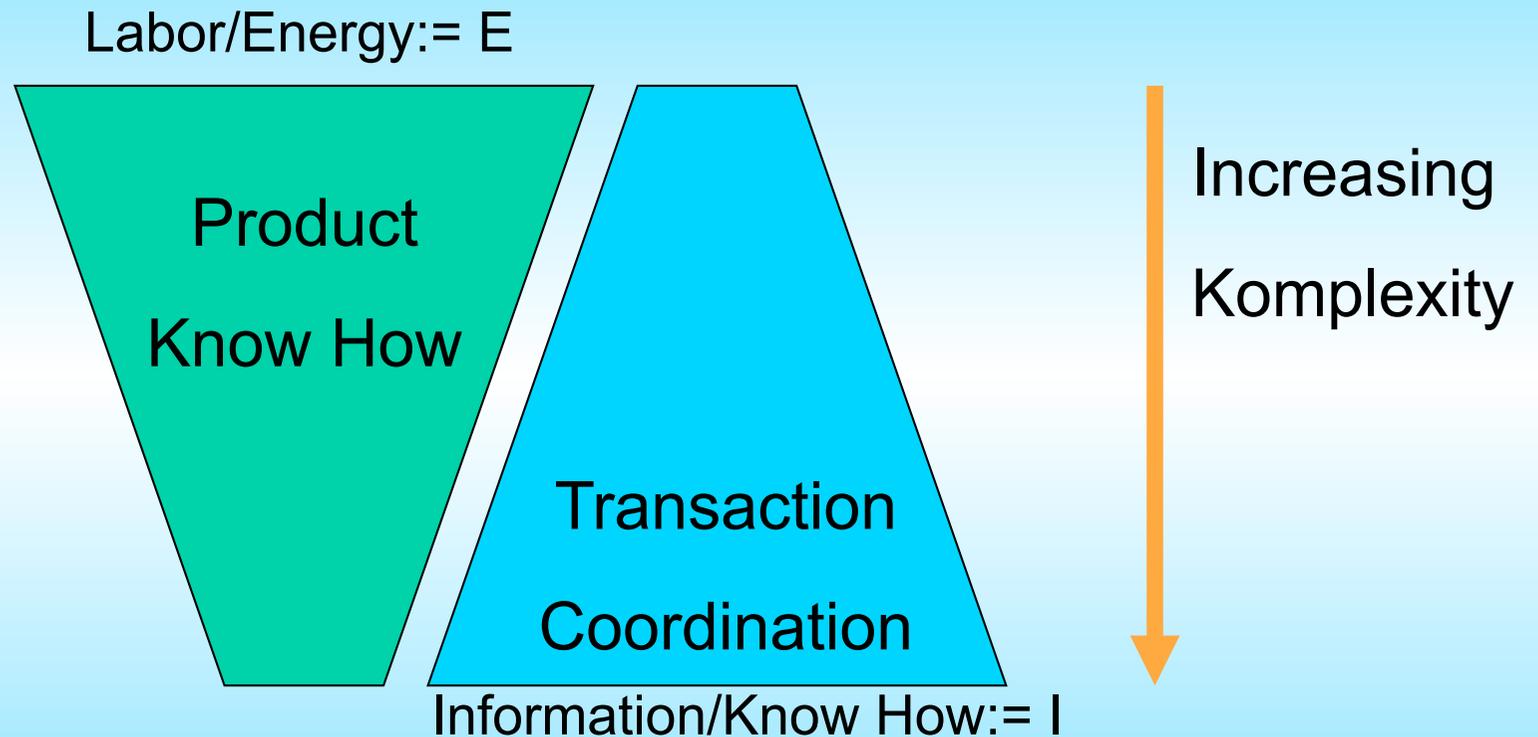

Production Costs

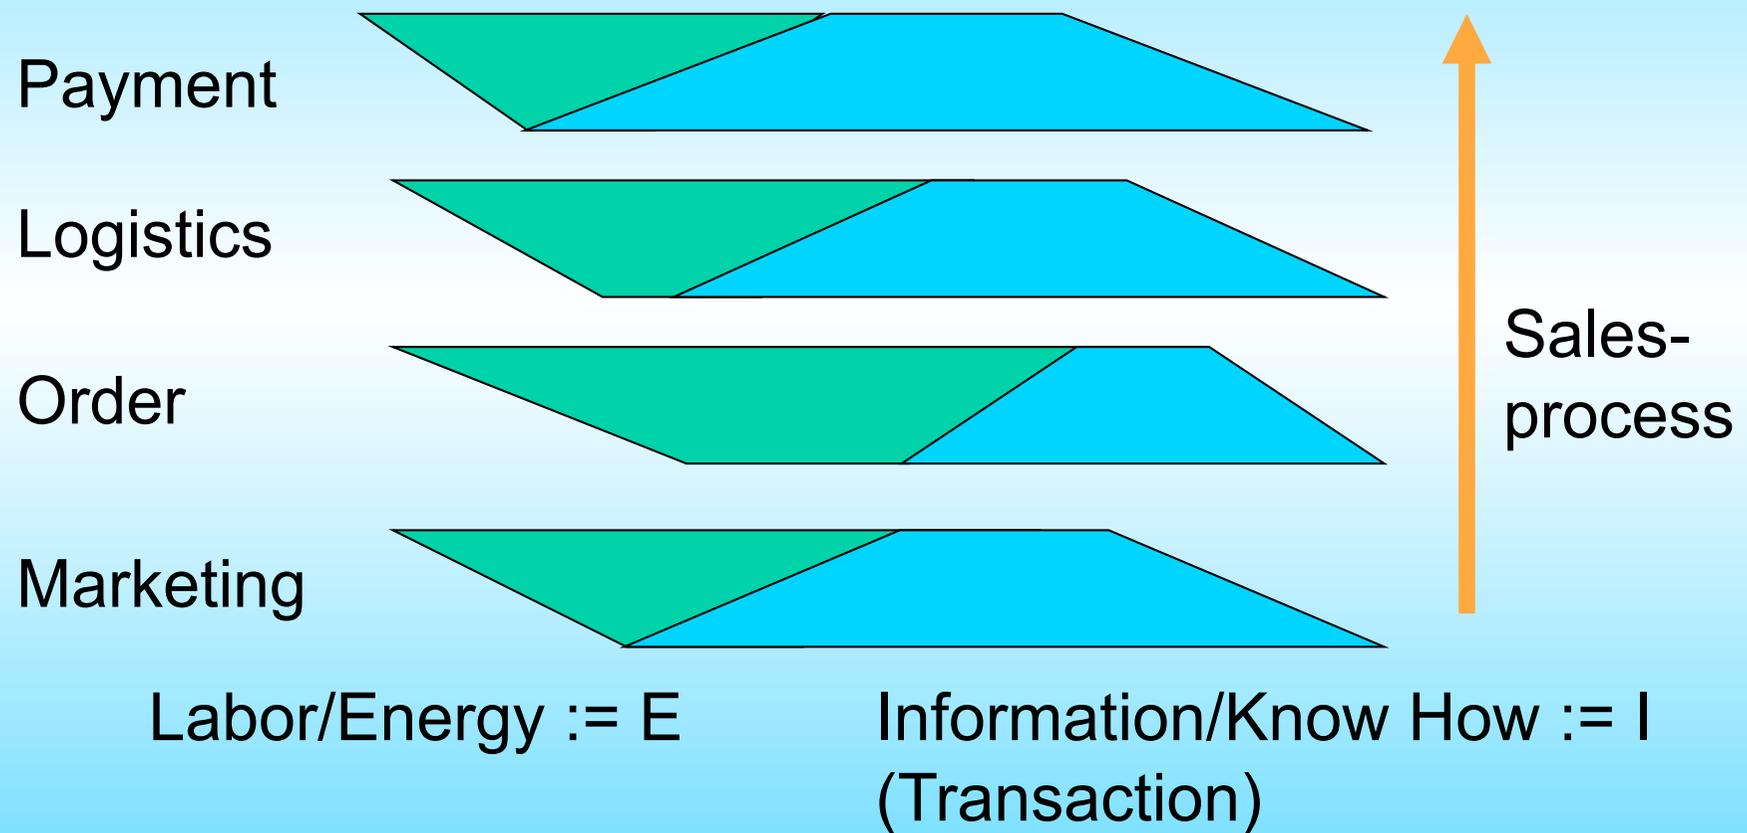

Transaction Costs

1. Search- and Retrieval Costs
2. Negotiation- and Decision Costs
3. Controlling- and Enforcement Costs

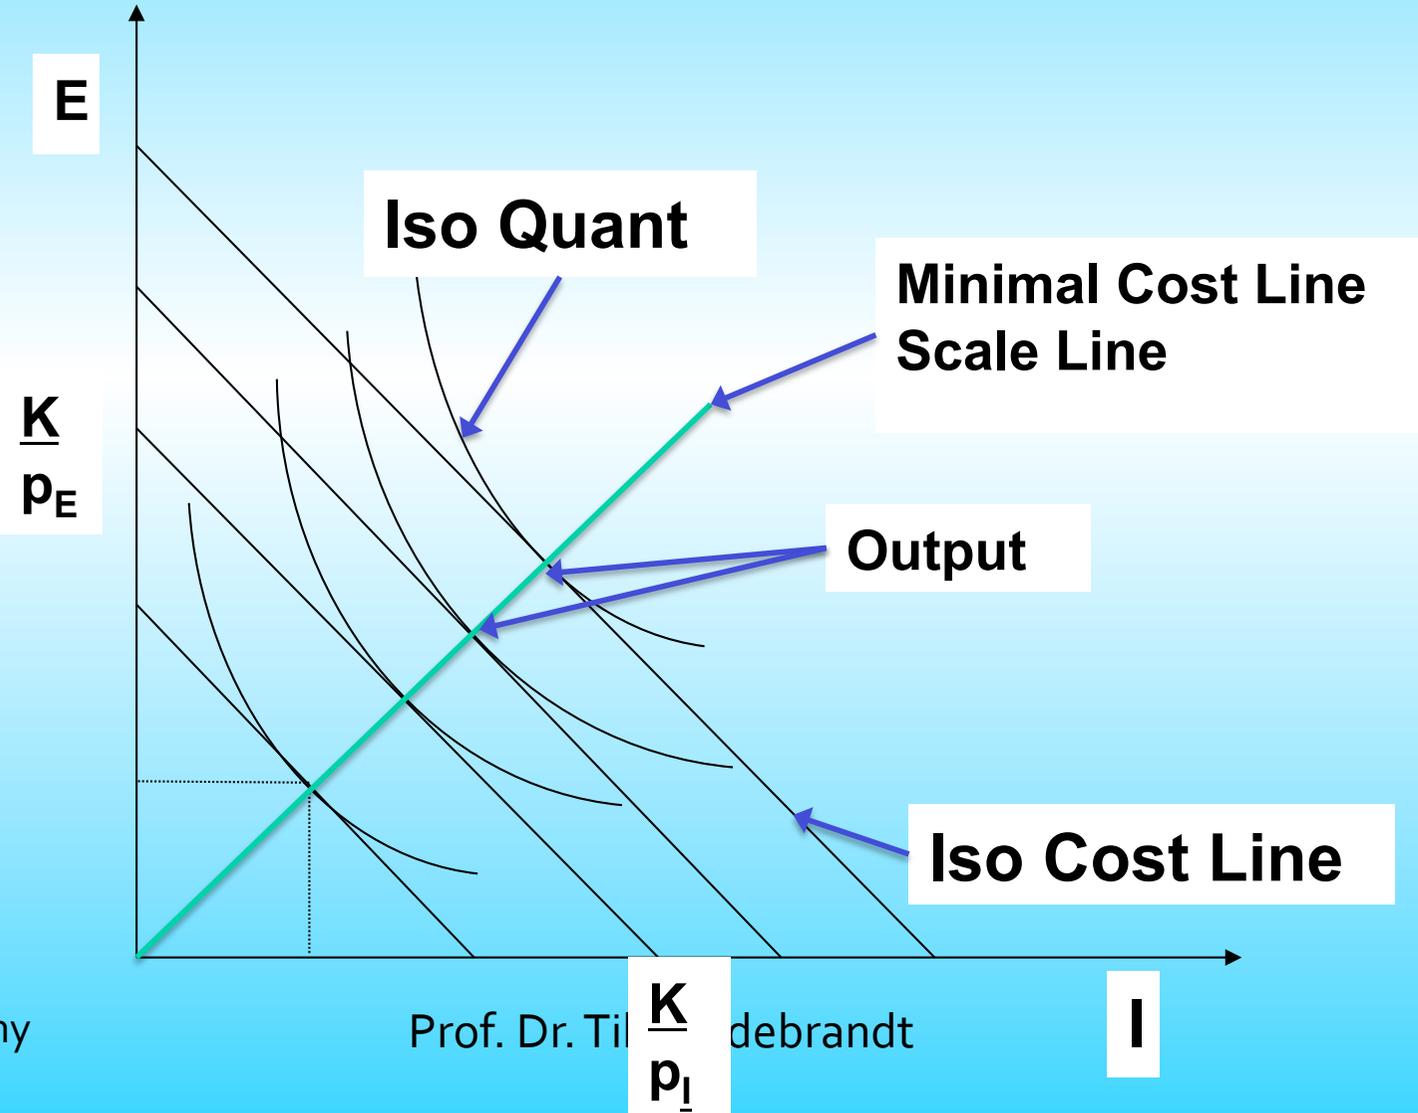

Substitution

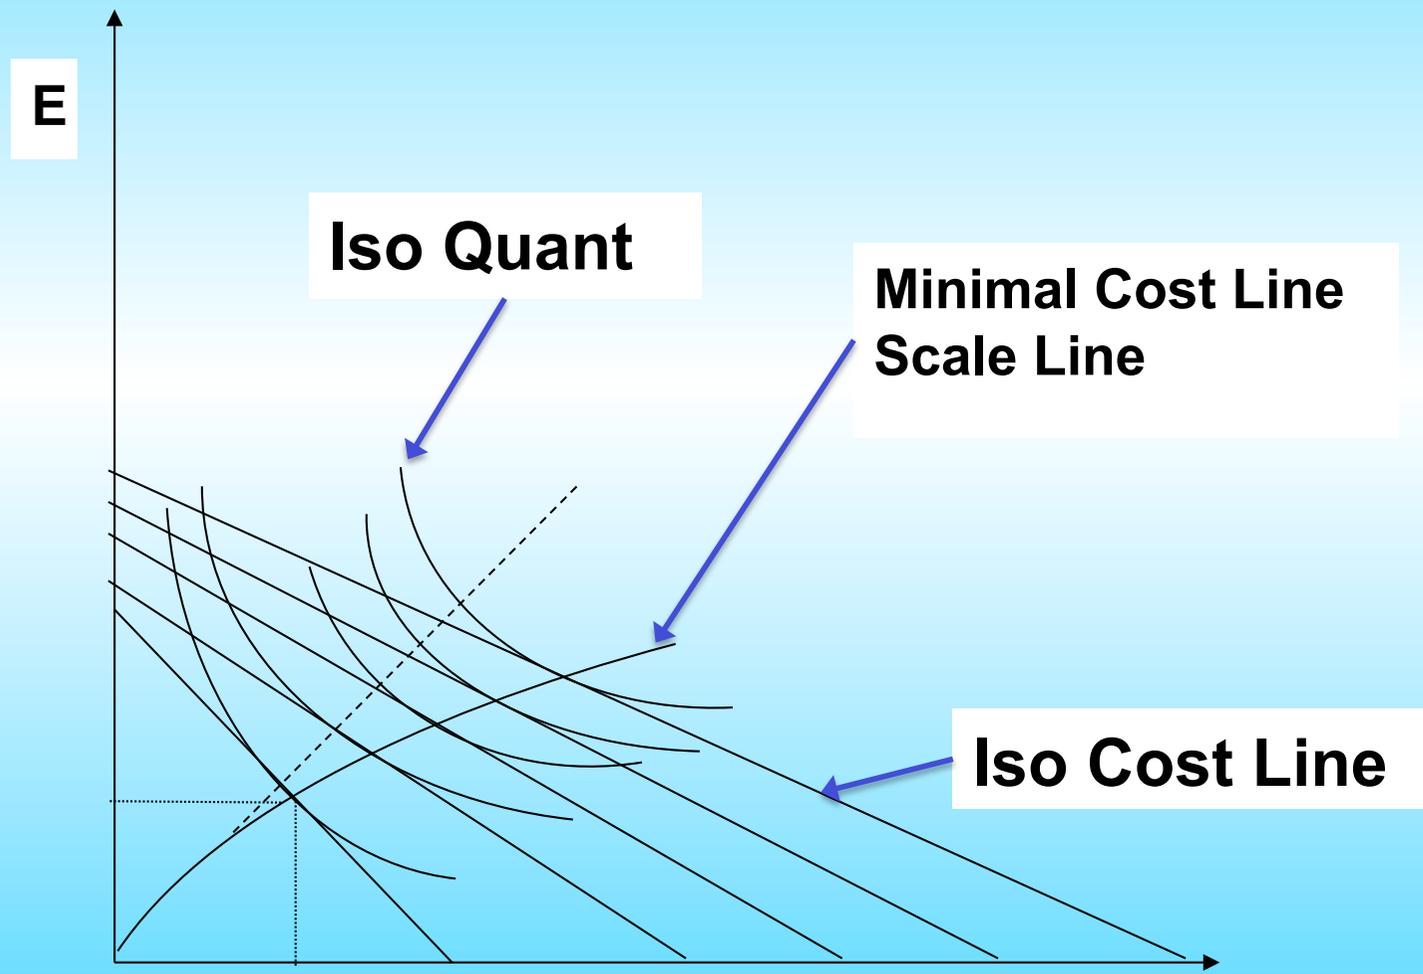

Substitution (Sales Process)

Minimal Cost Line Scale Line

Substitution Scale Line

Economic Principle: Minimizing (E-Commerce Version)

$$O = aE^\alpha I^\beta \quad \text{With } a, \alpha, \beta > 0$$

$$K = p_E E + p_I I$$

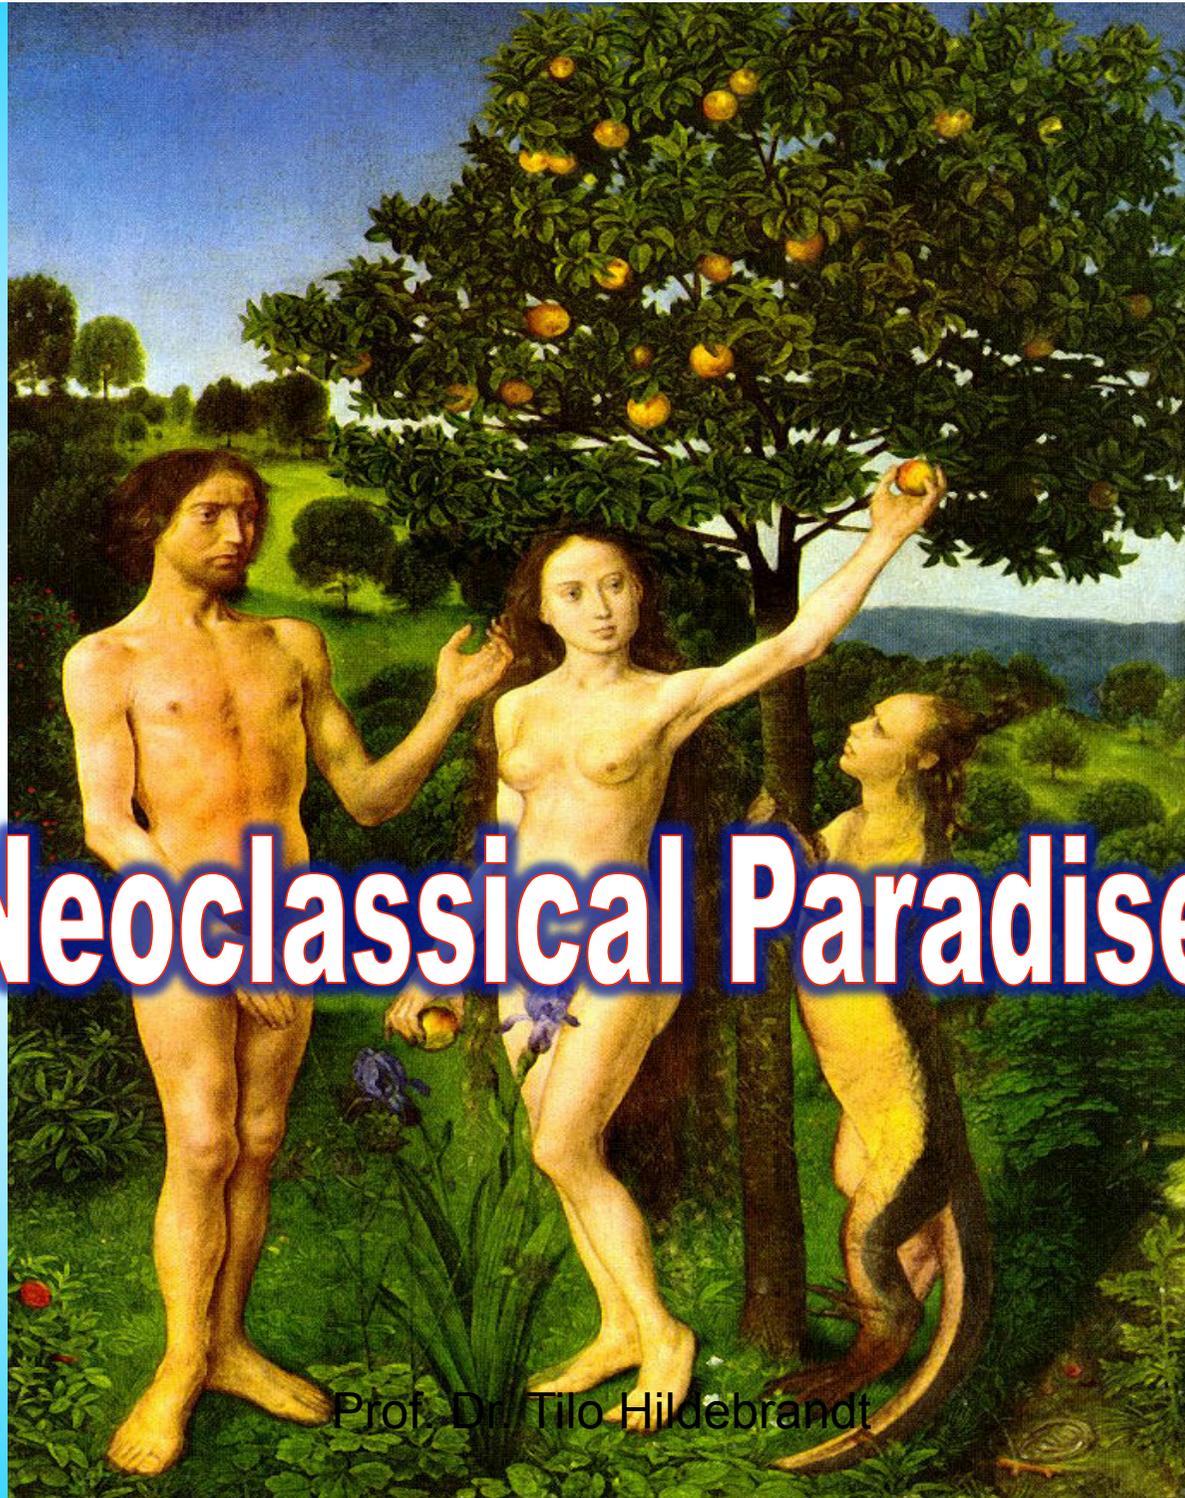

$$\min \left\{ K = p_E E + p_I I \mid O - aE^\alpha I^\beta \equiv 0 \right\}$$

Neoclassical Production Theory

Omniscient Actors in simple Decision Situations

- **No Adaptation Period**
- **No Quality Differentiation**
- **Total Information**
- **Decision only Price Based**
- **Closed System**
- **Equilibrium**

Neoclassical Paradise

Economic Reality

Nescient Actors in Complex Decision Situations

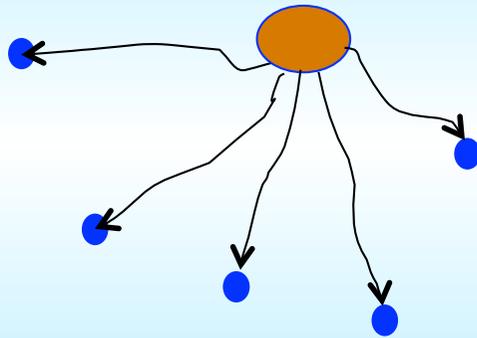

Economic Power

Why ?

Actors on the Internet

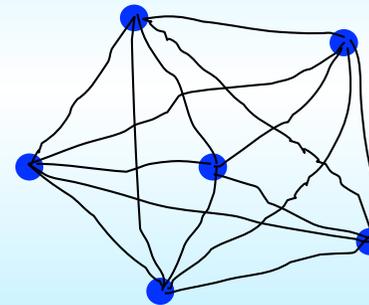

Exponential Growth of Value

Sender: 5 CP

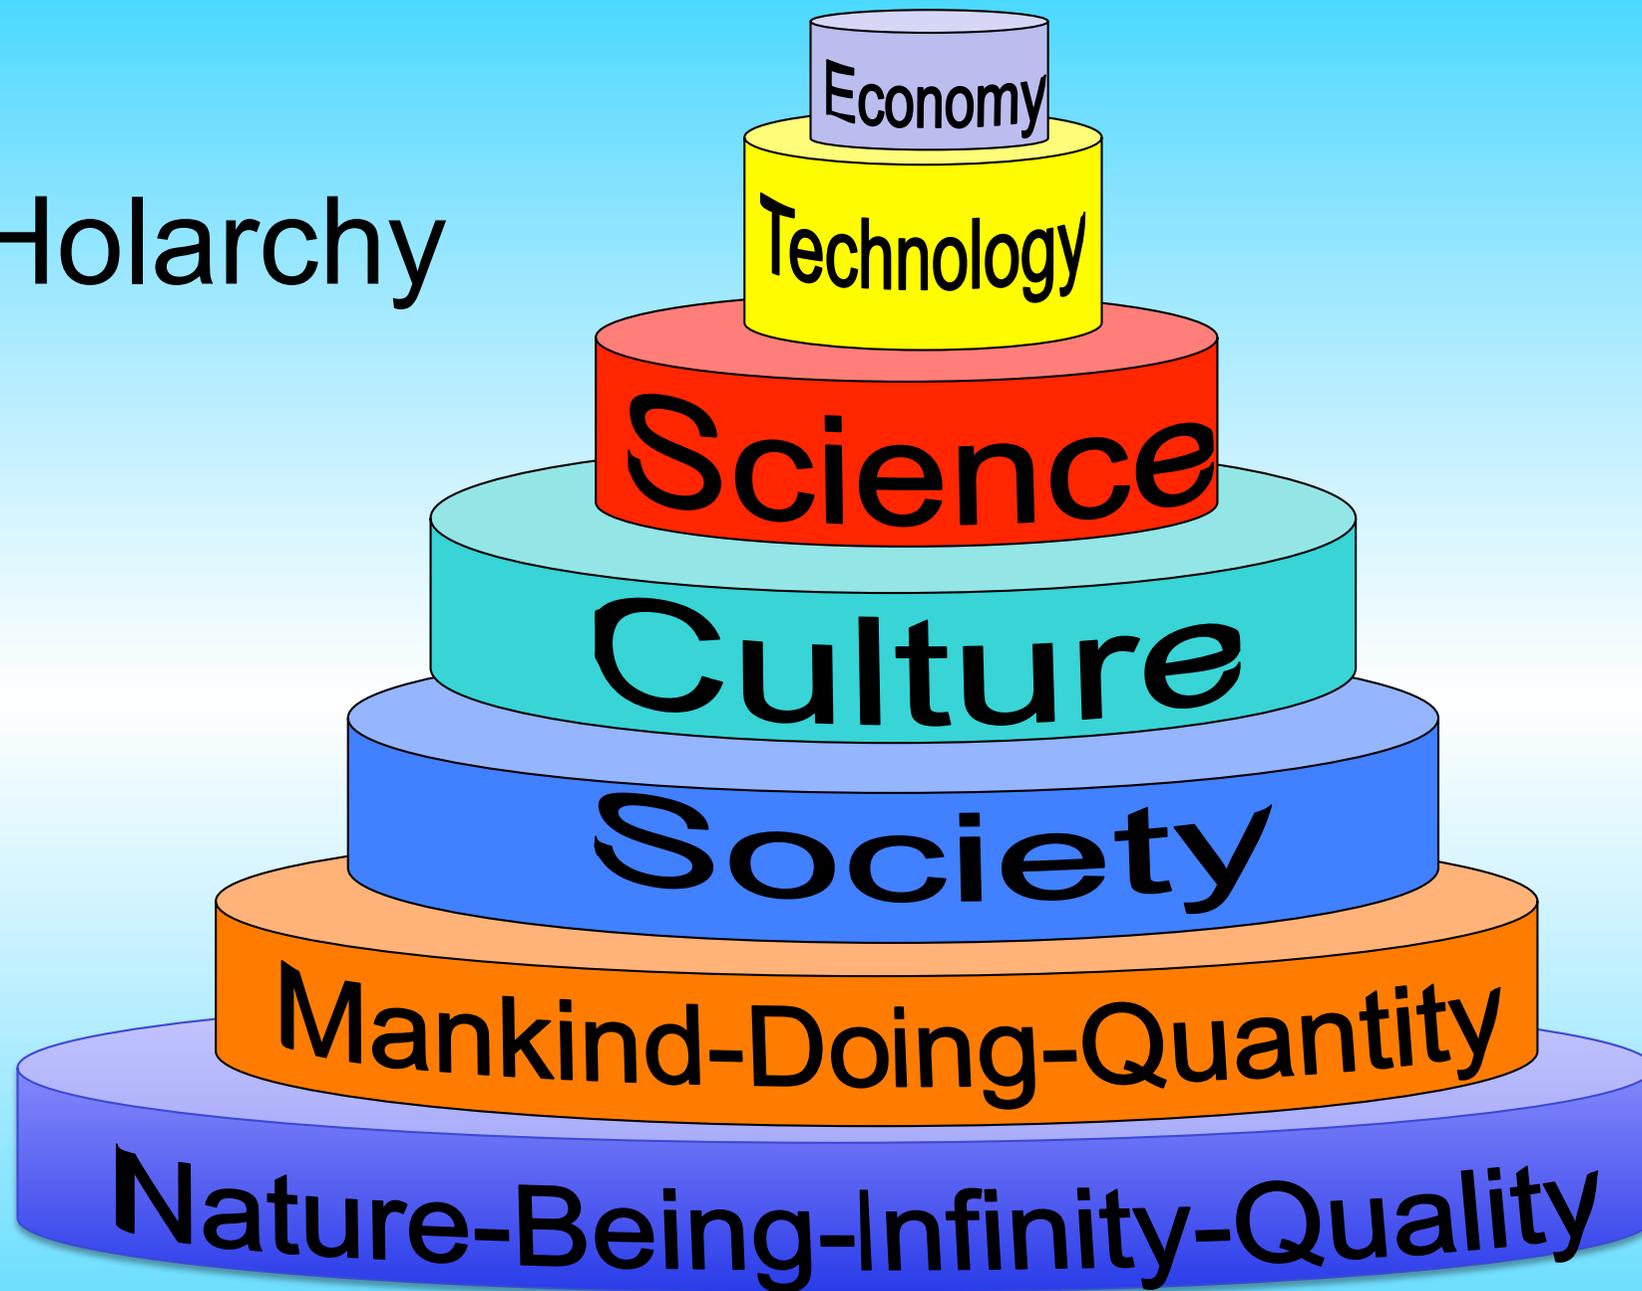

Might

Network: 15 CP

Strength

Holarchy

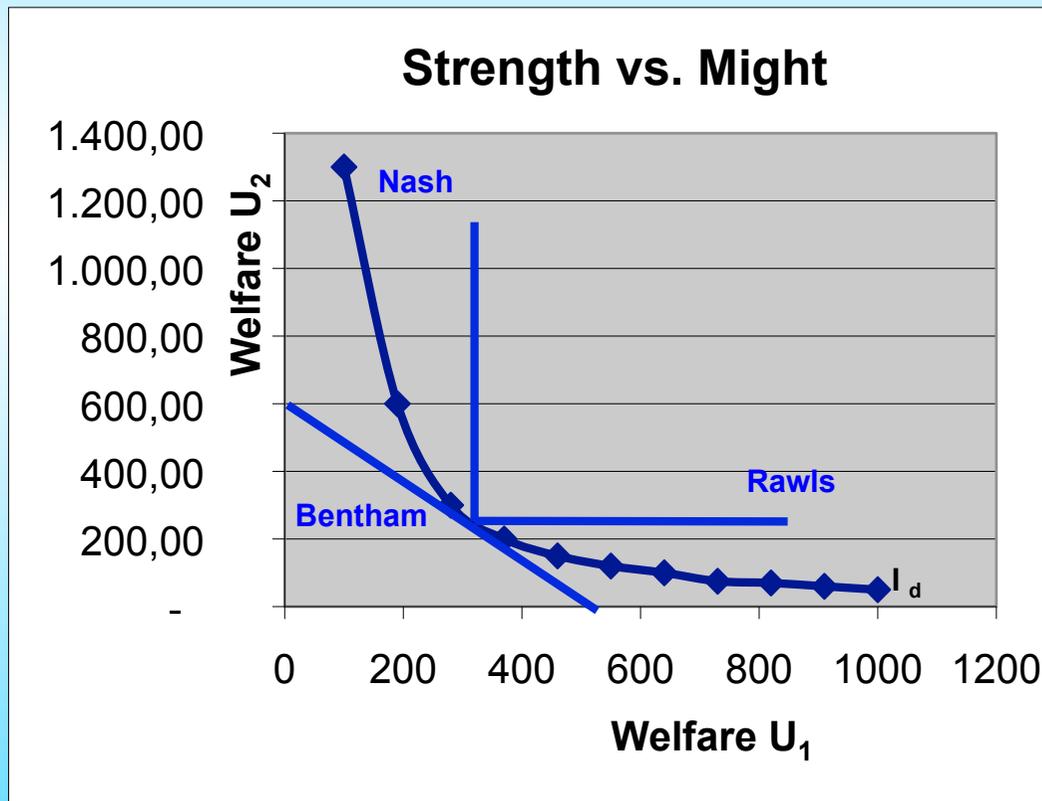

Welfare Economics

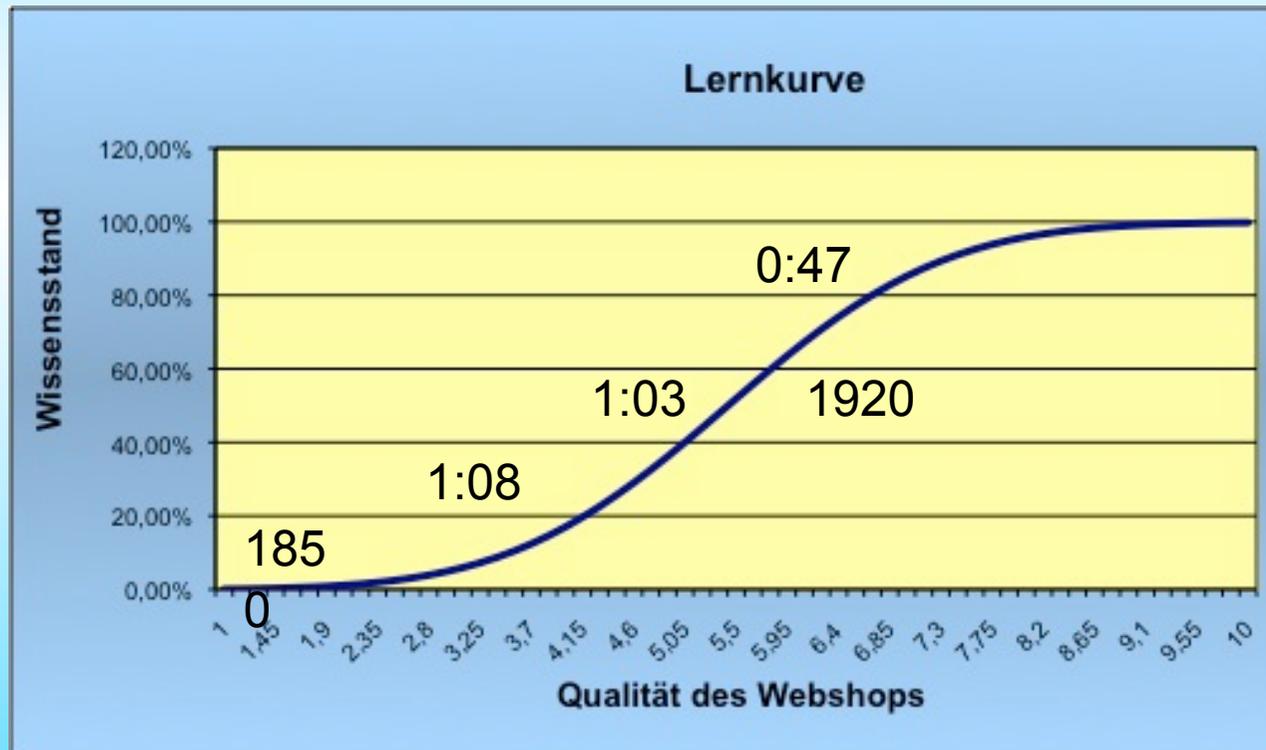

$$W_B = \sum_{i=1}^n U_i \quad \text{Bentham}$$

$$W_R = \min\{U_1, \dots, U_n\} \quad \text{Rawls}$$

$$W_N = \prod_{i=1}^n U_i \quad \text{Nash}$$

Learning Curve

“You’d better start swimming or you’ll sink like a stone, cause the times they are a’ changing.”
